Projects

BCI, <https://fathymosad21.github.io/BCI/> 

Developed the responsive frontend for a BCI application using P300 signals to control interactions.

Portfolio Website, <https://fathymosad21.github.io/protfolio/> 

Built a personal portfolio using HTML, CSS, and JavaScript to showcase

Crud App, <https://fathymosad21.github.io/crud/> 

Implemented a simple CRUD app with JavaScript for task management.

GYM, <https://fathymosad21.github.io/Gym/> 

Created an animated fitness landing page with interactive design.

Ramadan Countdown, <https://fathymosad21.github.io/rmdan/> 

Built a themed countdown page using HTML, CSS, and JavaScript.

Phones Showcase, <https://fathymosad21.github.io/phone/> 

Developed a responsive product display site with dynamic filtering.

Graduation Project, *BCI by P300* 

- A Brain-Computer Interface (BCI) project using the P300 signal to control user interaction.
- I was responsible for developing the project's frontend website, ensuring it is responsive, user-friendly, and clearly displays data and interface elements related to brain signal processing.

Certificates
